

SUMMARY of KFICS State Report Revisions since November 13th Release

The errors in the original November 13, 2017 report, that caused KDE to reissue it, relate to the Gross Area (GSF) for approximately 30 percent of the inventory of buildings. These errors, which did affect facilities' rankings, costs, and score, occurred when corrected verified data was overwritten with older initial values as new columns of information were added to the report.

For most facilities the difference was immaterial, however, there were a few facilities for which the difference in Gross Area were significant; notably, the facilities located in Boyd County, Scott County and Simpson County. The following data values were impacted, as their calculations rely on gross area in the calculation:

- Order based on Kentucky School Score
- Kentucky School Score
- Condition Index
- Costs to Repair for Urgent Priorities
- Costs to Repair for High Priorities
- Costs to Repair for Medium Priorities
- Costs to Repair for Low Priorities
- Total Budget Costs to Repair
- Projected Budget to Replace Current GSF

Additionally, KDE identified other technical errors in the facility descriptions and made those corrections to the revised report, even though they did not influence the facilities' ranking, costs, or score. There were 12 facilities affected, and these changes included:

- Year Built
- Facility Name
- School Number
- Enrollment
- Capacity

Please review the Excel file titled "KFICS 2017 State Report Released 2017-11-13 With Revisions Highlighted.xlsx" to see the highlighted data fields that were revised for each affected district facility. These fields have been corrected as provided on the "2017 KFICS State Report 2017-12-04 REVISED.xlsx", which is the final report.
